

## OBJECT

# NOKIA

## CONTRACTOR

Pohjanmaan Rakennuspelti Oy (PRP)

## MATERIAL

Aluminium composite

## MORE INFORMATION

Aluminium composite facades combine architectural design with colour. Aluminium composite can be used for large surfaces that remain uniform despite temperature variations.

Aluminum composite is a lightweight material for handling and installation. This material is easy to process and shape, giving the designer free rein. Several types of attachment methods allow for cost-effective solutions for all objects.

PRP panels can be installed with hidden or visible mounting. Hidden mounting options include a cassette system or elastic adhesive bonding. PRP has good experience in Finland's challenging conditions particularly with elastic adhesive bonding.

Elastic adhesive bonding used on the object shown.
